# Further customisations for XER Schedule Toolkit is unlocking more potential in the planning and management of projects

March 25, 2021

XER Schedule Toolkit has announced a range of new tools including a customisable dashboard packed full of schedule viewing and analysis features.

XER's cloud-based solution provides project planners and schedulers with a range of tools to allow them to automate daily tasks, saving time and money whilst also providing intelligent access to the schedule in a clear and value-adding format when using P6 software.

The toolkit works by converting data from planning software such as Primavera P6, Microsoft Project and Asta Powerproject allowing the user to view and analyse their project data simply and efficiently, with powerful dashboard analytics which enhance the use of the complex planning software it integrates with.

The new dashboard increases the flexibility for businesses to build XER Schedule Toolkit into their current way of working more seamlessly and build project dashboards which can delve into much detail as users desire. The latest features added to the system increases the transparency from board level to frontline

team members – helping all to understand progress simply and efficiently.

Contemporary schedule data accessible across your organisation

Infrastructure projects often involve large volumes of personnel, split into various teams and each tasked with their own role in the project. These projects require meticulous planning and real-time information to help the project stay on track and within budget.

XER Schedule Toolkit converts data from complex planning software packages (Primavera P6, Microsoft Project, Asta Power Project) and gives everyone involved with project delivery access to view and interrogate the project schedule in a user-friendly environment they can understand and derive value from.

Nick Halksworth, a senior planning consultant with Plan Ahead Project Management explains: "By providing all project stakeholders with instant access to view and interact with the contemporary schedule, we have been able to help educate everyone to understand their own responsibilities and also to see how they fit within the project's 'bigger picture'."

"The Toolkit's configurable forensic capabilities and schedule quality metrics can help radically transform the workload and output of planning Engineers. The considerable time saved dotting I's, crossing T's and producing reports can now be re-directed toward planning the project.

Nick adds: "Infrastructure businesses including Murphy, Spencer Group and Morgan Sindall are adopting XER Toolkit for its simplicity and the tangible benefits it can bring. In short, XER Toolkit helps every level of an organisation to collaborate in the project planning process, which ultimately helps drive project delivery."

Tailored packages for all requirements

XER's wide range of pricing plans ensure that there is a package to cater for organisations of all sizes including freelance planners, small and medium enterprises, projects and large corporations. To view the new XER Schedule Toolkit website, click here.
