

# Happy Birthday Candela!

July 10, 2023

Last month, **OPC Assessment** was really pleased to sing Happy Birthday to their user-friendly, online testing platform, Candela.

OPC Assessment aims to make the online experience easy and more efficient for both clients and candidates alike, as well as smooth the recruitment process for busy managers – saving time, effort and cost.

For a whole year, Candela has been busy supporting Talent Acquisition teams across the world, on many different sized recruitment projects.

- Candela has been up and running for just over 1 year.
- 46 new users have joined the many clients who already use the platform.
- In the last year, the platform has supported nearly 1,400 new recruitment projects – big and small, and;
- Over 50,000 candidates have sat assessment tools as part of a talent acquisition process.

Using Candela can bring many benefits for busy talent managers including:

1. Accelerating and facilitating pre-selection for busy recruitment teams;
2. Each Candela project has everything in one place for all candidate's needs whether that's invitations, candidate status, or assessment tool results;
3. A handy dashboard page quickly shows the status of any bookmarked projects. Shared team access, means everyone knows the activity's status and what needs to happen next.
4. Rapid scoring of assessments with immediate results at the click of a button;
5. Once registered you can purchase and use tests and exercises, at any time, if you are trained in the use of psychometric materials.

OPC Assessment's online testing platform, Candela is used worldwide to quickly and easily discover potential, and drive performance.

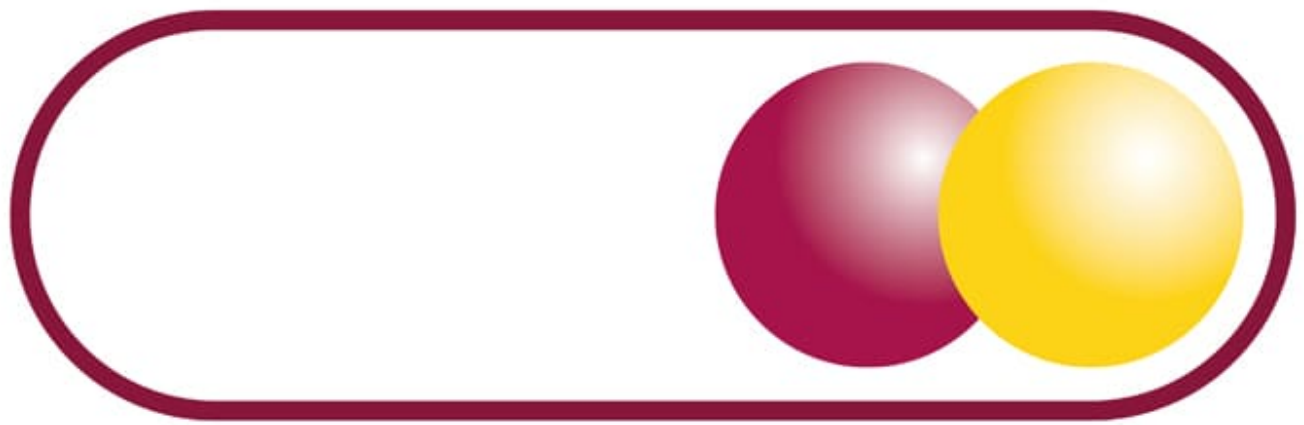

"Candela has proved to be a great platform to enhance the ever-evolving Talent Acquisition needs for our business. The self cut-offs and reports have been invaluable, adding to its flexibility," said a talent acquisition manager for a UK train operator.

**Get in touch** with the friendly team at OPC Assessment, to see how Candela can help fast-track your recruitment projects.
