

Luminate Traffic Management extended across Wales & Western Region and Anglia Route

December 19, 2022

Network Rail and Resonate are delighted to announce their decision to extend the deployment of Luminate Traffic Management across the Wales & Western Region and Anglia Route.

Deploying the system that has supported improved service delivery on Anglia and on the Great Western Mainline in Western will bring these benefits to more passengers and freight users across a much wider area. Luminate will also support the right time presentation and management of service delivery for train services using the Elizabeth line.

Ellie Burrows, Anglia Route Director said: "I am delighted that we are expanding our partnership with Resonate, deploying Luminate across a wider geography within the Anglia Route, helping us to continue to deliver improvements to the services for our passengers and freight users."

David Davidson Western Route Director said: "I am a great supporter of improving the tools and systems that our operators use. Luminate enables us to deliver very proactive operation and network management; further cementing our 21st Century Operations Strategy and improving the service we offer.

Anna Ince CEO Resonate said: "We are pleased and excited to continue our partnership to put rail

customers at the heart of the railway. It has been a pleasure working alongside the Anglia and Western Route teams and we are looking forward to continuing this relationship as Luminare is rolled out across the wider areas.”
