

Rolling Stock Maintenance & Depot Optimisation Europe Congress 2022

May 25, 2022

[Rolling Stock Maintenance Summit](#) returns to London next week taking place in person and online on 28-30 June 2022, with an additional third day dedicated to Depot Optimisation and global case studies on strategies and technologies focused on reduce maintenance downtime and cost.

As passenger rail operators seek to realise cost reductions through smarter, combined approaches to maintenance strategies and through new technologies to automate maintenance activities, the [Rolling Stock Maintenance and Depot Optimisation European Congress 2022](#) is designed to help heads of engineering and depot management ensure they have the most efficient maintenance plans in place and that investment in new technology is justified with tangible benefits.

Taking place in person in London from 28-29 June, with a live stream option via an virtual platform, the event showcases global case studies on data derived maintenance strategies and smart monitoring technologies focused on reducing maintenance downtime and cost, this is one conference this year that the rolling stock maintenance community should not miss.

And, For the first time the conference includes a whole separately bookable day (30 June) dedicated to

Depot Optimisation allowing delegates to explore the suitability and future upgradability of depots for new fleets, how to optimise planning to prevent delays and how to ensure depot safety and security across all levels.

The speaker faculty includes:

- Kyle Lau, Chief of Engineering, Beijing MTR
