

Something completely new is coming to Rail Live 2023

June 16, 2023

Innovators to demonstrate world's first Orange Train Wash

Following three years of excitement, curiosity and overwhelming interest in the **Orange Train Wash's** (OTW) ground-breaking concept, we are using Rail Live 2023 as a platform to demonstrate our first ever operational unit.

OTW revolutionises how train exteriors are maintained with trailblazing cleanliness standards and radical environmental, carbon reduction, installation, productivity and cost saving benefits. Our pioneering modular OTW system is set to have a 'never seen before' impact on railways globally.

• This is a very proud moment for me and my team and marks our most significant milestone so far. The

ability to see the world's first OTW underscores that this is not just a concept, but something that will transform exterior train cleaning as we know it.

Please visit us at stand F22 on 21 and 22 June 2023 at Rail Live. I would be delighted to meet with you.

The OTW operational unit has been produced as part of a successful collaboration with Dura Composites – our technical developer and manufacturing partner.
